

SOT Interpretation

Composite Score

- The composite score bar represents the weighted average of all scores
 - The more difficult conditions (3, 4, 5, 6) receive higher weighting
- Meaningful improvement in *normal* individuals: > 8 points
 - *Wrisley, 2006*
- A composite score < 38 has been associated with risk for falls
 - *Whitney, 2006*
- Patients are also at risk for falls if the composite score is > 15 pts below norms for their age
 - *Vouriot, 2006*
